

Spindle

AI-native Fashion Lifecycle Management

https://testspindle.com

Fashion has one of the world’s most complex supply chains

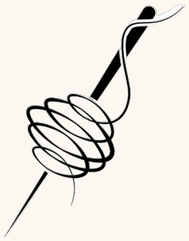

A single brand may develop **300 to 400 styles** in one month or collection. Each style can involve different materials, suppliers, samples, production methods and delivery timelines, all managed across different teams. This global system powers one of the **world’s largest consumer industries.**

Problems through Product Lifecycle in fashion

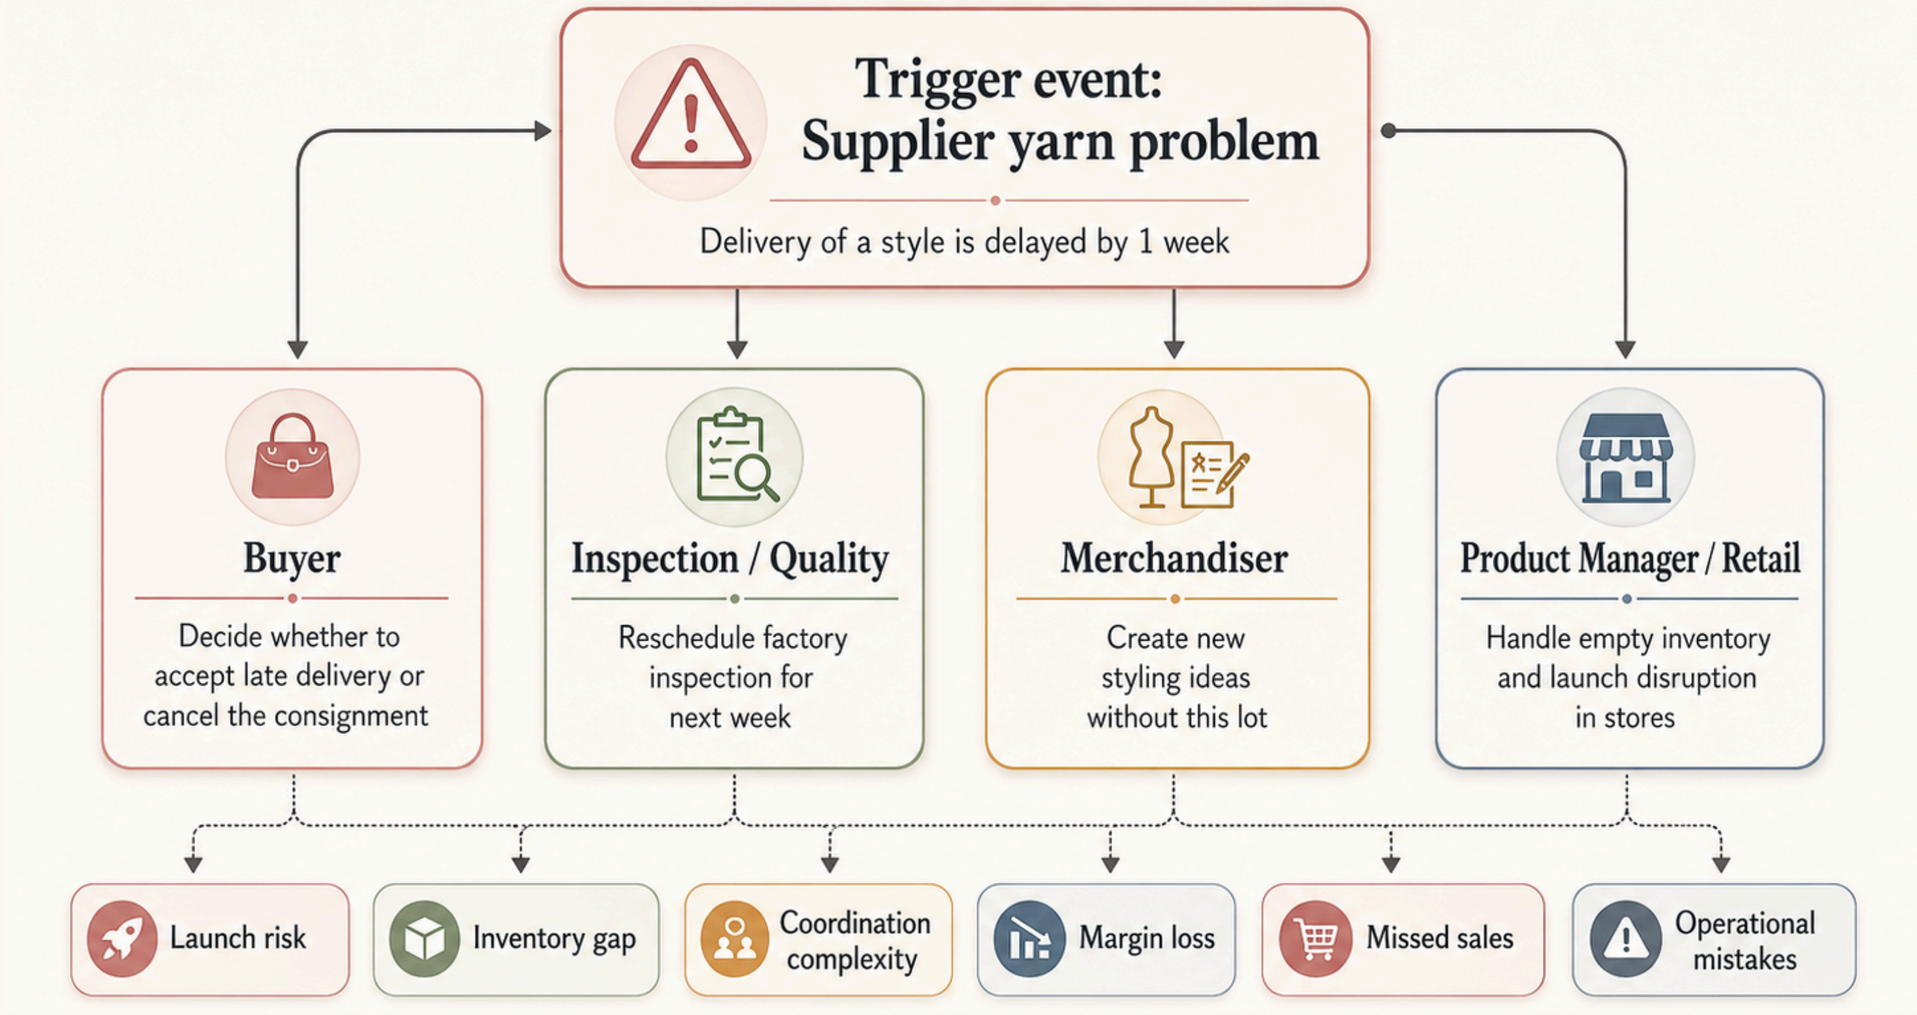

1) **Fashion has a Data Aggregation Problem.** Fashion is a creative field involving work across photos, sketches, tech-packs, BOMs, Fit notes, Colorways etc. across informal channels like emails, WhatsApp, teams. Existing Systems require people to upload changes manually and coordinate different PLMs and ERPs.

2) Software is **not built for fashion.** Fashion has a **complex operational plane on steroids** spread across different roles and workflows which are deeply connected and actively making changes. All teams work on different tools today, and use PLM systems primarily for data management.

3) There is no way to **track product change.** A change (costing, fit, colorways, BOM, delivery dates, quantity, launch timing) creates a **chain reaction** across the business. This chain reaction is tracked all manually through PDFs, spreadsheets, handwritten notes, phone calls etc. leading to follow-ups, invisible changes and planning gaps and causing late launches, missed sales and cannibalization.

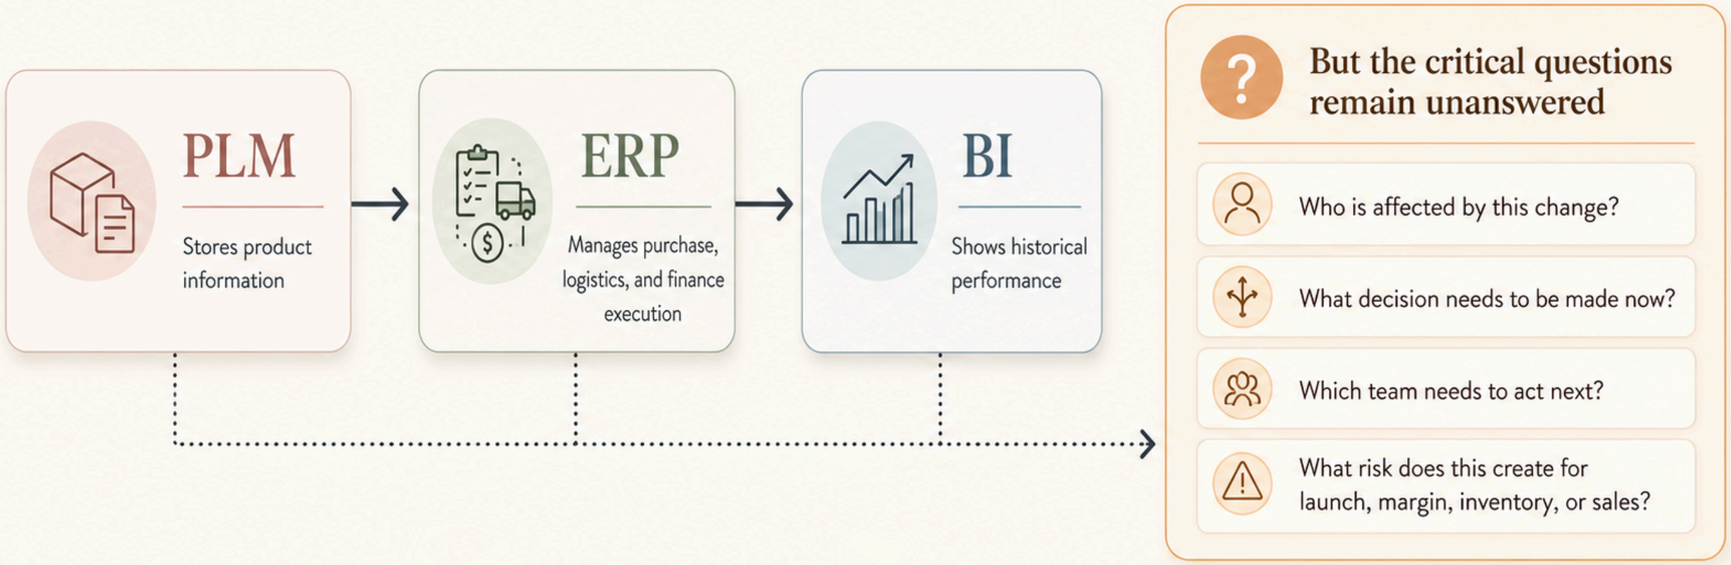

A glimpse of The Chain Reaction

Reiterating on the Software Gap

Fashion operations break not because companies lack software, but because existing systems do not understand the flow of decisions across roles in fashion ops.

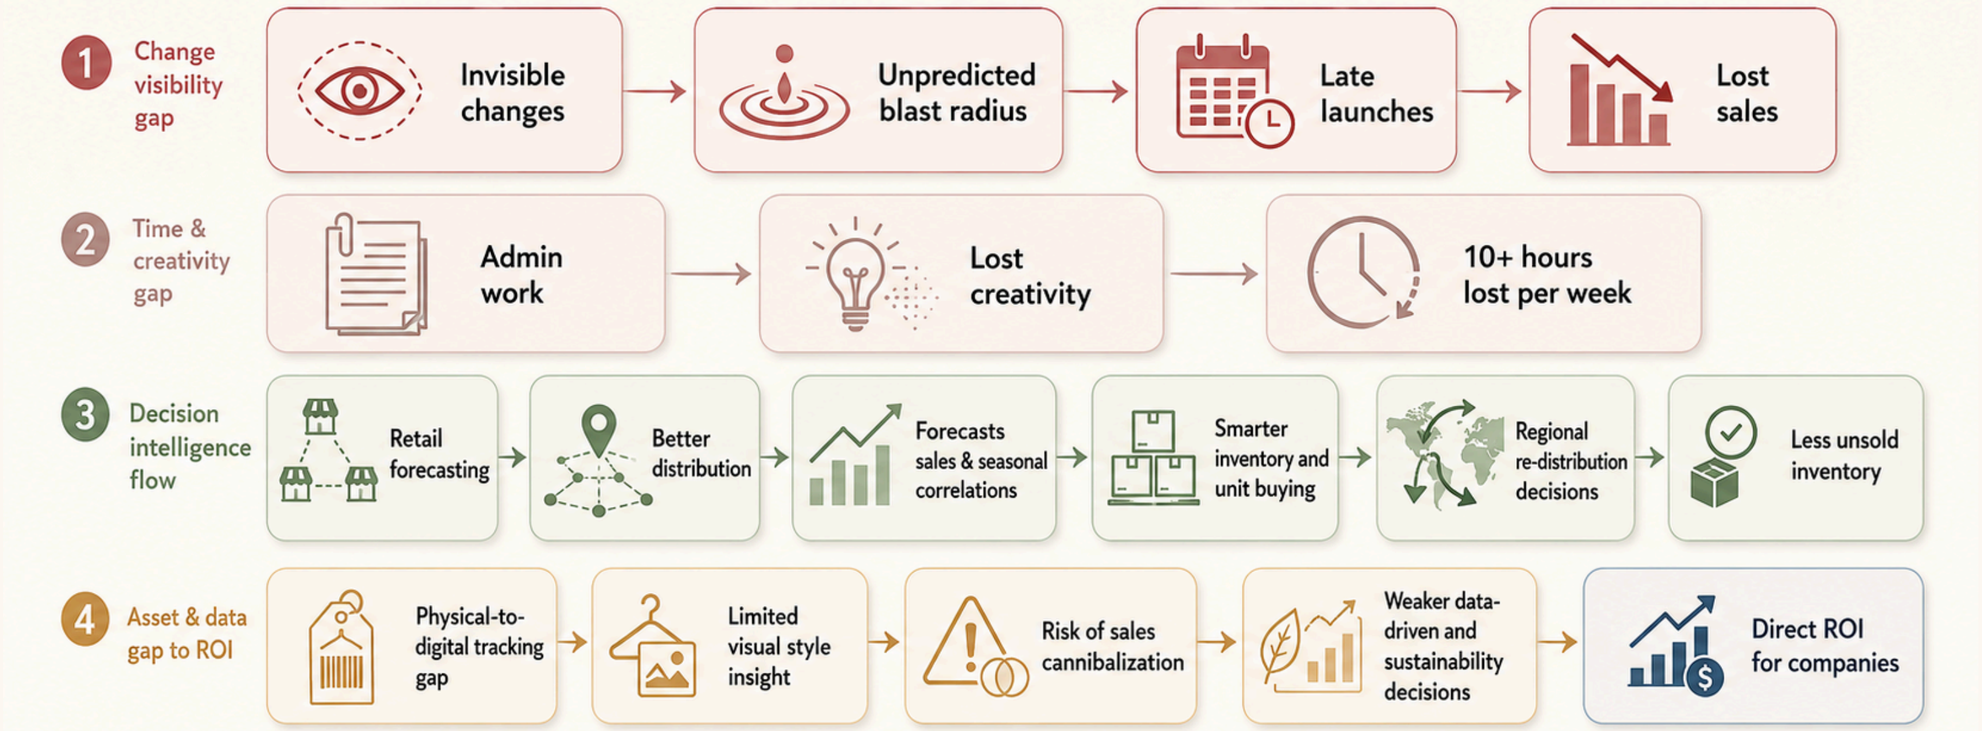

Commercial Impact of the Chain Reaction on fashion brands

Total value at risk

10–15M$

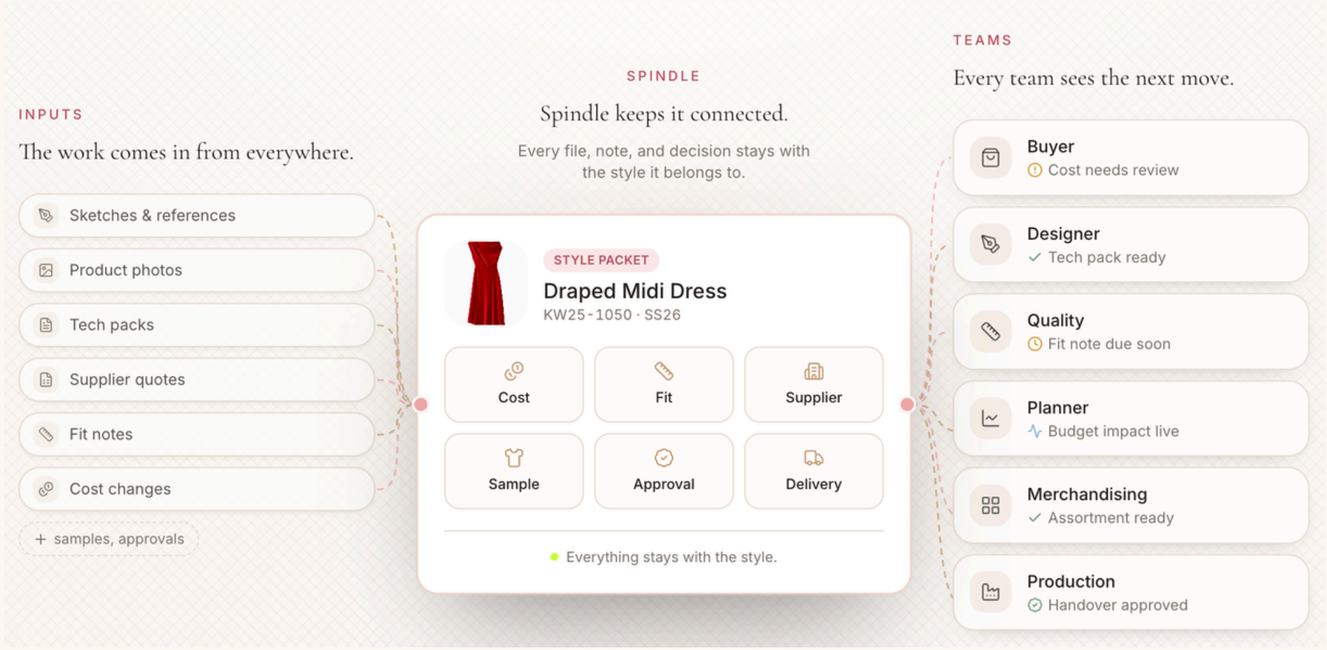

per year of a 100M$ brand

Fashion teams lose money when change, assets, and teams are not connected.
Better visibility leads to faster decisions, lower waste, and stronger commercial outcomes.

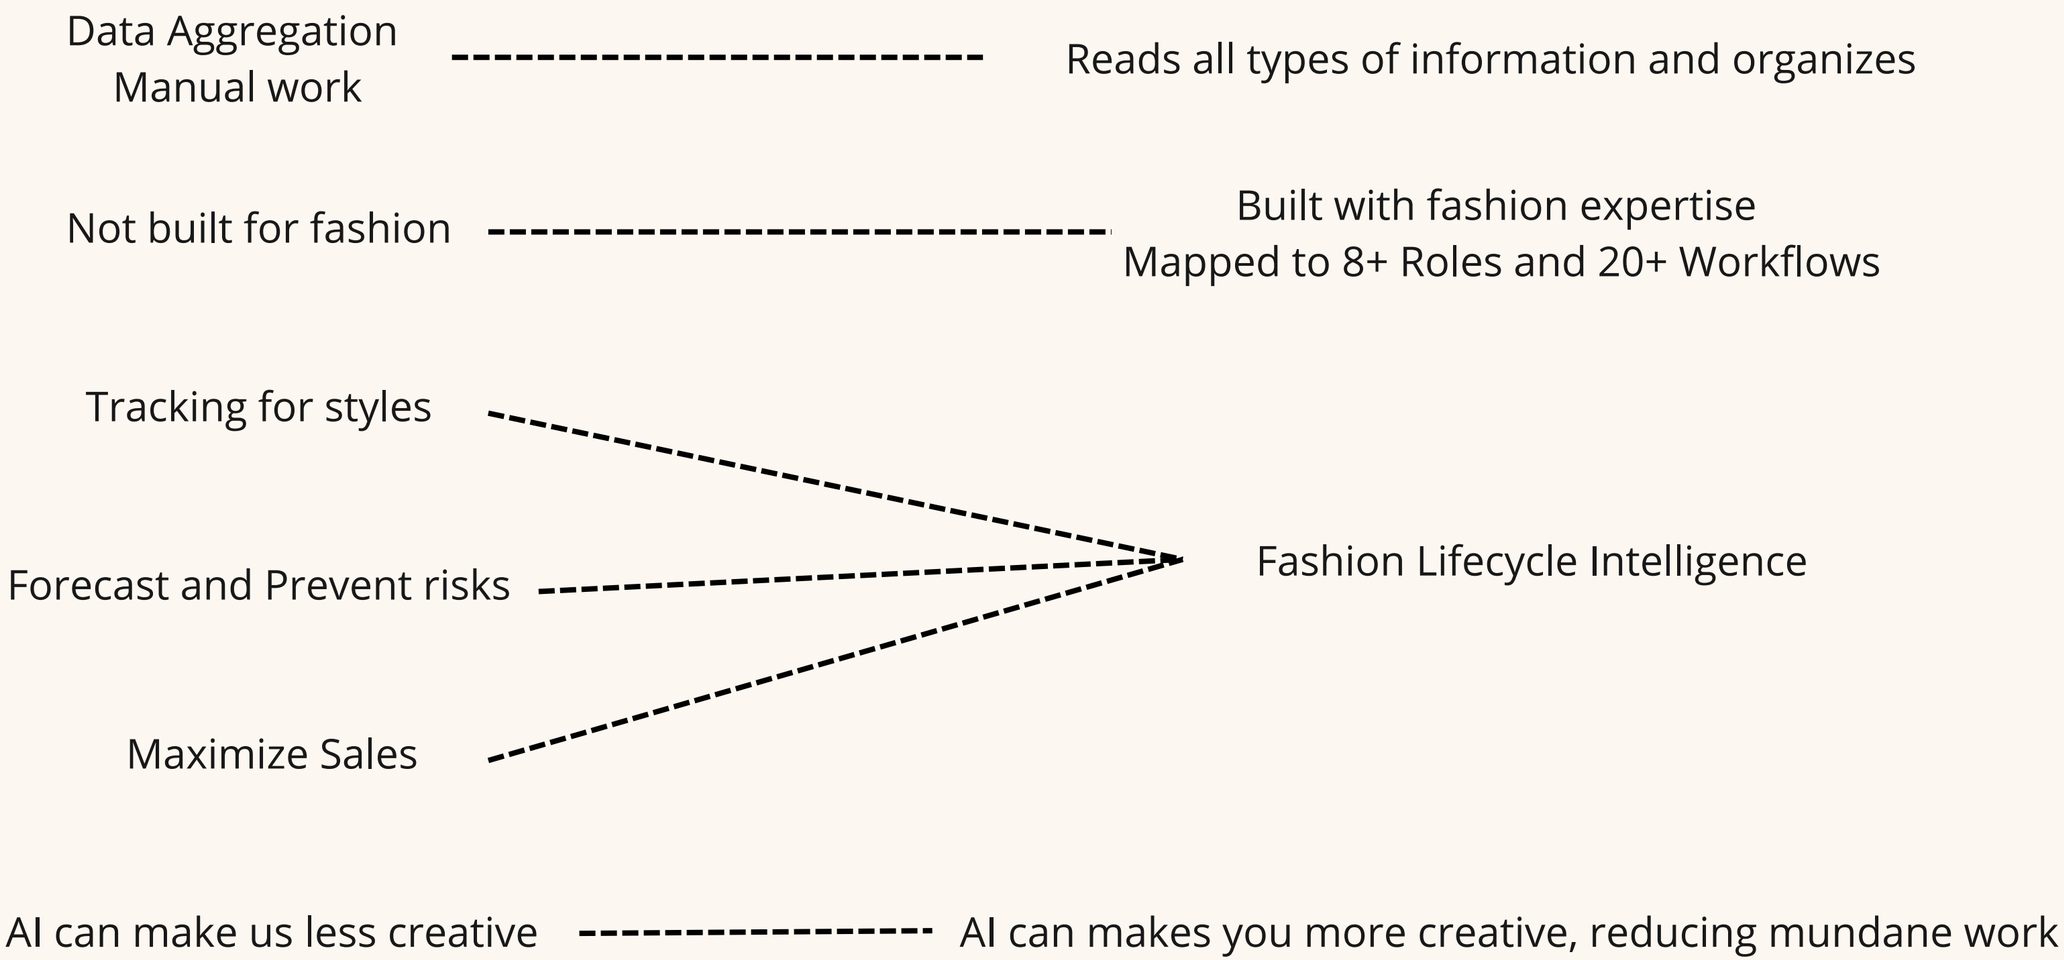

Spindle’s Value Proposition

Spindle is the AI-native Fashion Lifecycle Management system. Spindle helps products move seamlessly from runway-to-launch helping different fashion roles collaborate, deleting manual work and raising invisible details that might get missed in the operational mess.

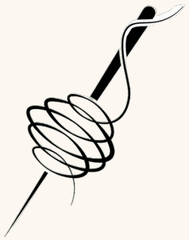

Problem to Solution

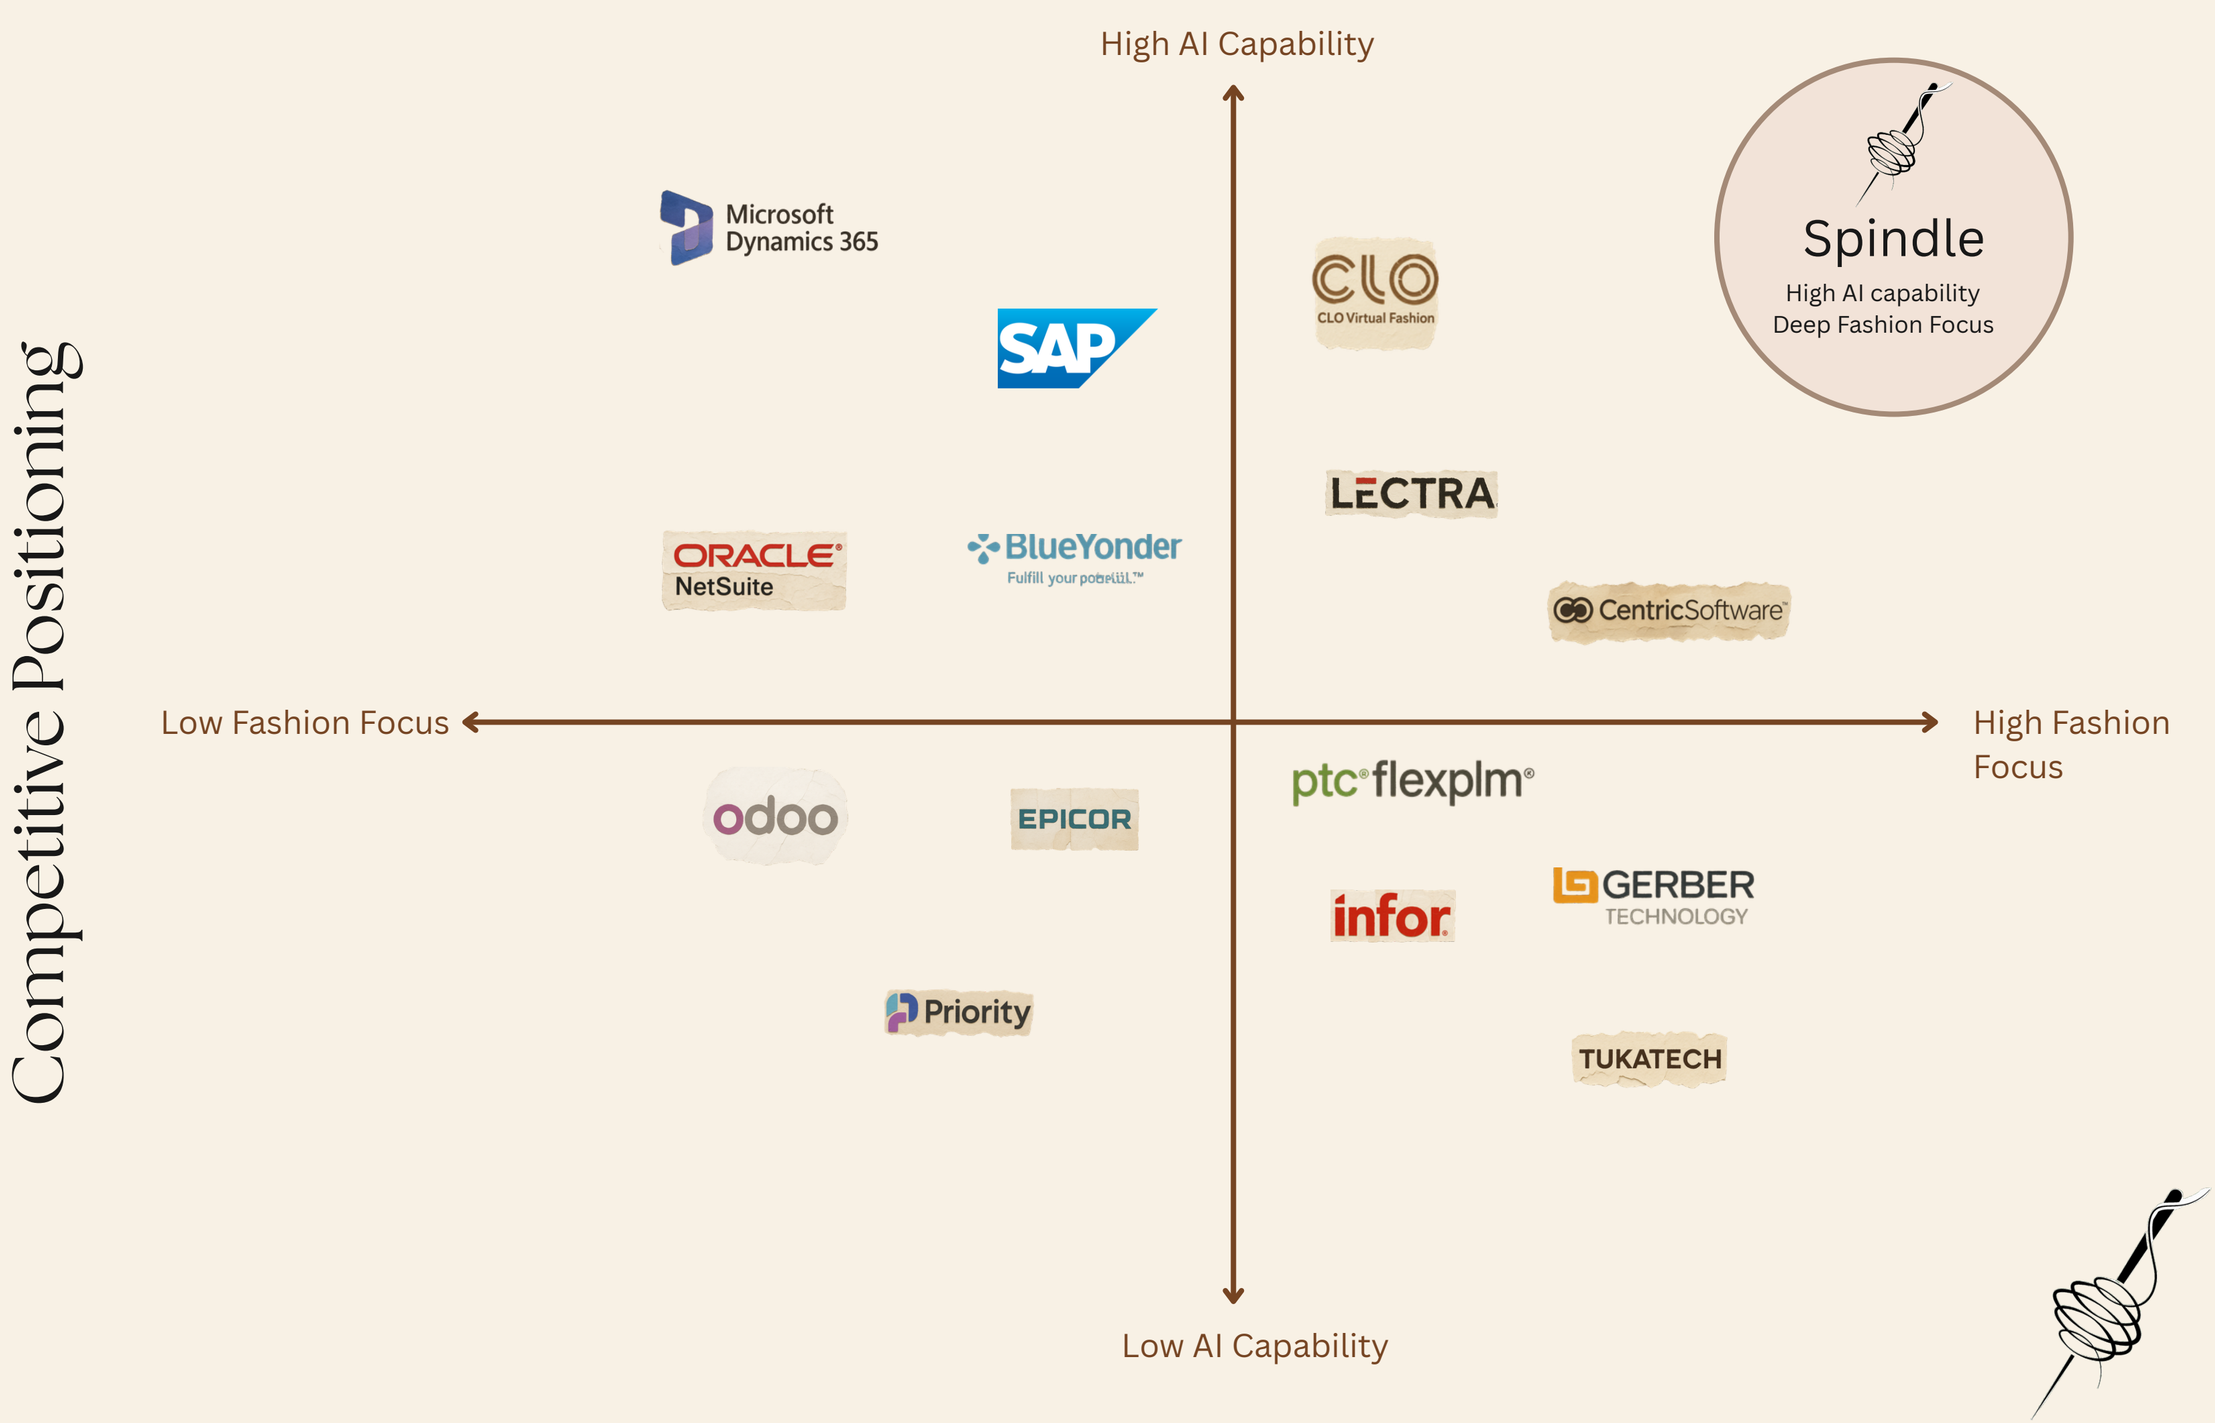

Why Spindle is not another PLM or ERP?

Spindle is the AI action layer between product data, operational change, and team decisions.

Capability	**Spindle**	**PLM**	**ERP**	**BI**
Reads messy fashion inputs: supplier emails, quotes, files, visuals, sketches, tech-packs, fit notes, spreadsheets	Native	Limited	Limited	Limited
Supports the full fashion product lifecycle through role-specific views for buying, design, planning, quality, merchandising, operations, etc.	One product, 8+ role views, 20+ workflows	Partial	None	Limited
Connects every product update to the right teams, records, and workflows.	Native	Partial	None	None
Tracks the blast radius of every product change — buyer's strategy changes, merchandiser's style ideas, PMs launch dates, Retail manager's inventory, Sales etc.	Native	Partial	None	None
Combines product, workflow, sales and inventory data to surface live risks, trends and next actions.	Native	None	None	Partial
Ease of adoption and in-workflow guidance	Built-in, contextual guidance	Training-heavy	Training-heavy	Specialist knowledge required

Competitive Positioning

YVES SAINT LAURENT

COO at a Fashion Brand and Visual Board expert at

Centric Software

"We currently enter the same product data into three different systems."

"Change log is the most important thing in fashion."

"Finding the right data at the right time is the main problem"

"Creativity keeps fashion alive. I'll feel. my job is not relevant because it's too much admin work"

Our Ideal Customer Profile

Customer segment	Ideal customer profile	Current environment	Spindle's role
Beachhead ICP	Fashion brands with **$20M–$200M revenue**, high style volume, multiple suppliers, and limited internal IT	Excel, email, shared files, and disconnected point tools	**Primary Fashion Lifecycle Management system**
Enterprise expansion	Established brands with **$200M–$1B+ revenue**, dedicated product teams, and existing PLM/ERP systems	PLM and ERP, but critical decisions still happen outside them	**Fashion Lifecycle Intelligence layer**

Bershka GANNI SANDRO BROWNIE UNIQLO

MANGO ZARA Desigual H&M

Pricing Model

	Paid Pilot	FLM Core	FLM + FLI Pro	Enterprise
Ideal customer	Qualified design partner	Growing fashion brand	Established fashion brand	Large brand or retailer
Scope	One collection and product category	Primary Fashion Lifecycle Management system	FLM with lifecycle intelligence and recommended actions	Intelligence and orchestration across existing PLM, ERP, and internal systems
Commercial model	Fixed-fee, 12–16 weeks, <10 users	Annual subscription, 10+ users	Annual subscription, 10+ users	Custom annual or multi-year agreement
Indicative pricing (per brand)	**$5K–$10K**	**$15K–$30K ARR** From ~$125/user/month	**$25K–$65K ARR** From ~$210/user/month	**$75K–$250K+ ARR**
Expansion drivers	Conversion to annual contract	More users, categories, and workflows	Advanced intelligence, data sources, and integrations	Additional brands, regions, systems, and business units

Land with one collection. Expand through users, workflows, integrations and business units.

Market Opportunity

Our ambition: become the first unicorn in fashion tech.

Path to $8M–$10M ARR

Consistent growth in ARR outpacing costs, driving improving net returns year over year.

Validate — 2026

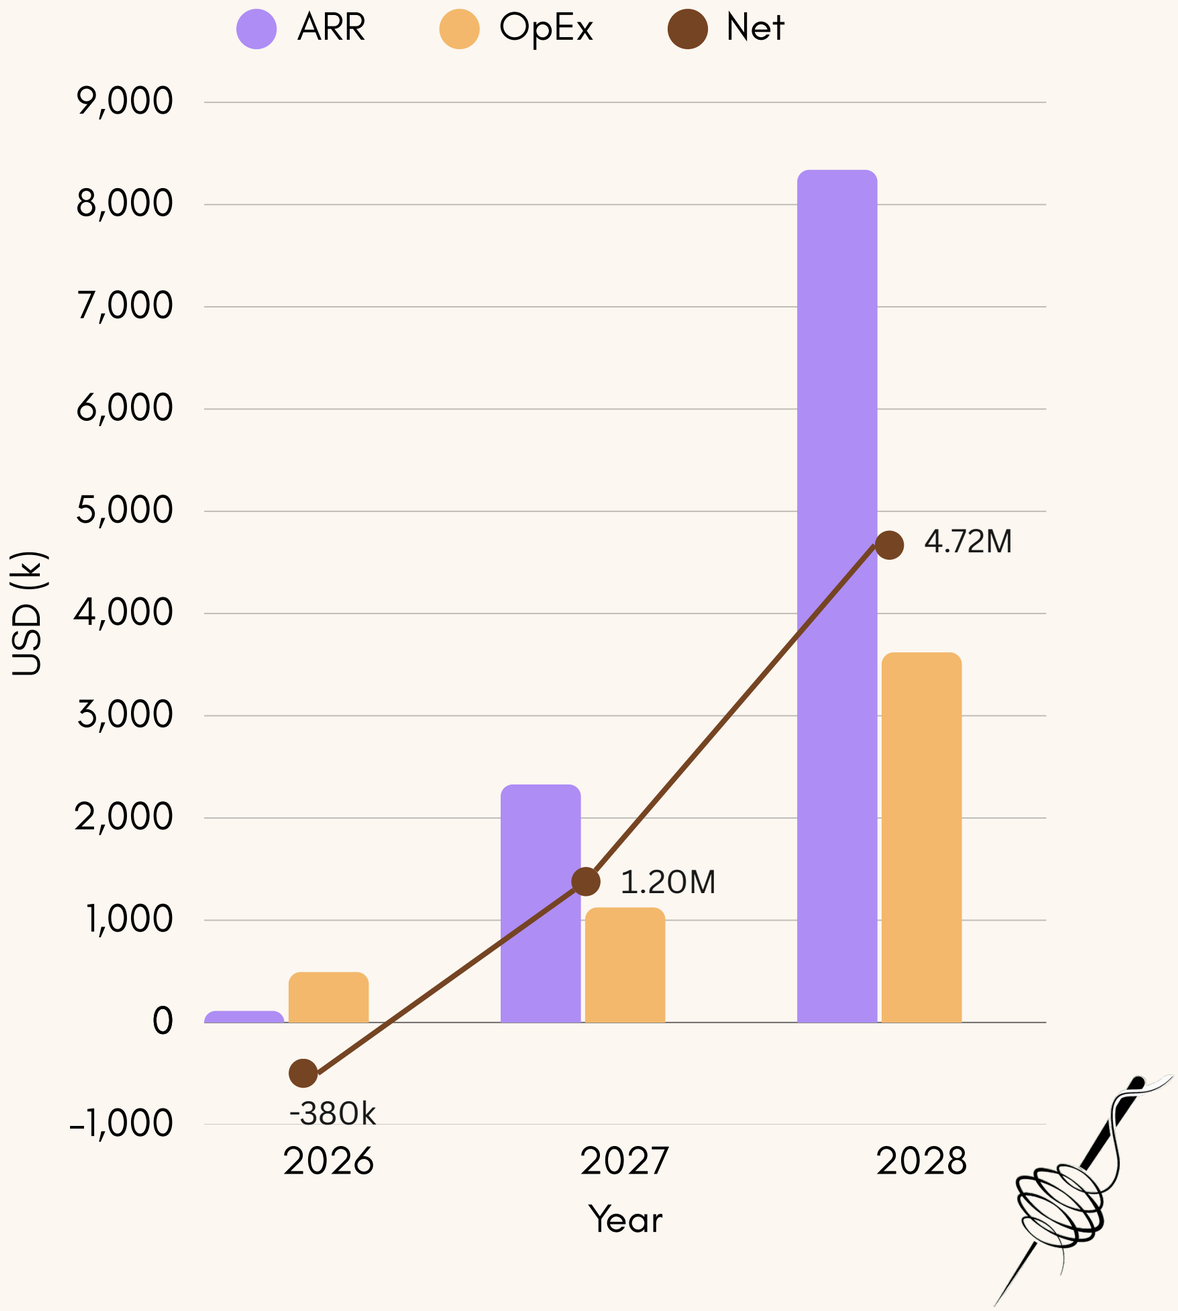

Launch 8–10 paid pilots, convert first annual customers, prove measurable operational ROI, and Standardize initial onboarding. Build social media and outreach.

Scale — 2027

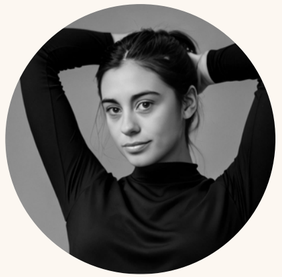

Build repeatable founder-led sales motion, reach $2.5M–$4M ARR beyond operating costs, and Launch standard integrations.

Expand — 2028

Reach 140–165 customers, Increase contract value through enterprise adoption, additional teams, deeper workflow integration, and reach $8M–$10M ARR.

Founding Team

Marta Aynes

CEO

MBA in Fashion Management at Parsons. 6+ years of experience in Fashion Operations at brands like Mango, Ganni, and Dagne Dover.

Ayush Verma

COO & CPO

Masters in CS and NLP Researcher at Columbia University. Brings operational experience from India's Leading EV company. Research Paper submitted in NeuroIPS.

Krishanu Saini

CTO

Masters in CS from UT Austin. Architected systems for trading anomalies at Goldman Sachs. Scaled 2x startups to 1M+ valuation. 150+ citations in Generative AI and Anomaly Detection.

No manual work. Smarter decisions. Better collections.

Raising $1.25M in Pre-Seed Funding

Base Runway

$1.0M

10-12 months

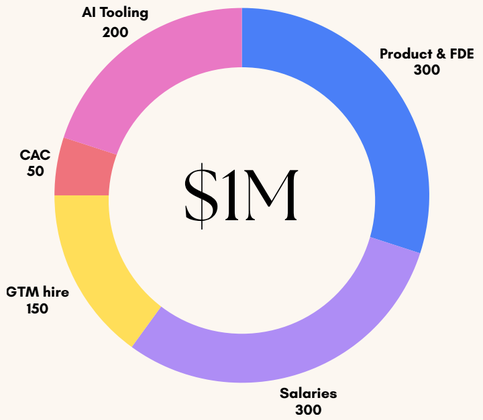

Growth Reserve
